

Dashboard Documentation

Global Retail Sales Analytics Dashboard

1. Project Overview

The objective of this Power BI dashboard is to transform raw retail sales data into meaningful business insights using interactive visualizations and key performance indicators (KPIs). The dashboard enables decision-makers to monitor sales performance, profitability, customer behavior, and regional performance.

2. Dashboard Objectives

The dashboard was developed to answer the following business questions:

What is the total sales generated?
Which regions contribute the highest revenue?
Which product categories perform the best?
Who are the top customers?
Which products generate maximum profit?
How do discounts affect profitability?
What are the monthly sales trends?

3. Dataset Used

Attribute	Details
Dataset	Global Superstore
Records	51,290
Columns	27
Domain	Retail Sales

4. Dashboard KPIs

The dashboard displays the following Key Performance Indicators:

Total Sales
Total Profit
Total Orders
Total Customers
Average Order Value
Profit Margin
Average Discount
Average Shipping Cost

These KPIs provide a quick overview of the company's business performance.

5. Dashboard Pages

Executive Overview

The Executive Dashboard provides a summary of overall business performance.

Visuals Included:

KPI Cards
Sales by Category
Profit by Category
Sales Trend
Sales by Market
Sales by Region

Purpose:

This page allows management to understand the overall health of the business.

Customer Analysis

The Customer Dashboard focuses on customer purchasing behavior.

Visuals Included:

Top Customers
Customer Segment Distribution
Sales by Customer
Orders by Ship Mode

Purpose:

Identify high-value customers and understand customer segmentation.

Product Analysis

The Product Dashboard analyzes product performance.

Visuals Included:

Top Products
Sales by Sub-Category
Profit by Product
Quantity Sold
Discount vs Profit

Purpose:

Identify best-selling and most profitable products.

Regional Analysis

The Regional Dashboard evaluates geographical performance.

Visuals Included:

Sales by Country
Sales by Region
Sales by State
Shipping Cost Analysis
Order Priority Distribution

Purpose:

Compare business performance across different regions.

6. Filters and Slicers

The dashboard includes interactive slicers for dynamic analysis.

Available Filters:

Year
Market
Region
Category
Segment
Ship Mode

Users can filter the dashboard to analyze specific business scenarios.

7. DAX Measures Used

The following DAX measures were implemented:

Total Sales
Total Profit
Total Orders

Total Customers
Average Order Value
Profit Margin
Average Discount
Average Shipping Cost

These measures enable real-time calculations across all dashboard visuals.

8. Business Insights

The dashboard provides several business insights, including:

Highest revenue-generating category
Most profitable category
Best-performing region
Top customers by sales
Highest-selling products
Monthly sales trends
Relationship between discounts and profit
Regional profitability comparison

These insights support data-driven decision-making.

9. Tools Used

Microsoft Power BI Desktop
Microsoft Excel / CSV Dataset
SQL (MySQL)
Python (Pandas & Matplotlib)

10. Conclusion

The Global Retail Sales Analytics Dashboard successfully converts raw retail sales data into an interactive business intelligence solution. The dashboard enables users to monitor KPIs, explore trends, analyze customer behavior, evaluate product performance, and compare regional sales through interactive visualizations.

This dashboard demonstrates the practical application of Power BI for business analytics and supports informed decision-making using real-world retail data.
