

EDA Insight Report

Project 07: Exploratory Data Analysis on Sample Superstore Dataset

Objective

Perform exploratory data analysis (EDA) on the Sample Superstore dataset to discover meaningful business insights, identify trends, risks, and business opportunities.

Dataset Information

Dataset: Sample Superstore

Total Records: 9,994

Total Columns: 13

Tools Used: Python, Pandas, Matplotlib, Google Colab

Analysis Performed

- Dataset overview
- Missing value analysis
- Duplicate record check
- Summary statistics
- Region-wise sales analysis
- Category-wise sales analysis
- Region-wise profit analysis
- Category-wise profit analysis
- Top 10 sub-categories by sales
- Segment-wise sales analysis

Key Insights

- West region generated the highest sales and profit.
- Technology category produced the highest overall profit.
- Consumer segment contributed the highest sales.
- Phones and Chairs were among the best-selling sub-categories.
- Furniture generated comparatively lower profit than Technology and Office Supplies.

Conclusion

The EDA transformed raw business data into actionable insights that can help management make informed decisions regarding product strategy, regional performance, and customer segments.
