

Operations KPI Dashboard Report

Objective

The objective of this project is to build an Operations KPI Dashboard using the Sample Superstore dataset. The dashboard summarizes key business metrics to help management monitor overall business performance.

Dataset

SampleSuperstore.csv

Analysis Performed

1. Operational KPIs

The following key performance indicators were calculated:

- Total Sales
- Total Profit
- Total Orders
- Total Quantity
- Average Discount

2. Region-wise Sales Analysis

Sales performance was analyzed across different business regions to identify the highest-performing region.

3. Category-wise Profit Analysis

Profit generated by each product category was evaluated to determine the most profitable category.

Key Insights

- The highest-performing sales region contributes significantly to overall revenue.
- Some product categories generate higher profits than others.
- Average discount levels affect business profitability.
- KPI monitoring helps management track business performance effectively.

Business Recommendations

- Increase focus on high-performing sales regions.
- Invest more in profitable product categories.
- Monitor discounts to maintain healthy profit margins.
- Review operational KPIs regularly for informed decision-making.
- Improve performance in lower-performing regions.

Conclusion

The Operations KPI Dashboard provides a concise overview of business performance using important operational metrics. Such dashboards support faster and more effective management decisions.
