

Marketing Campaign Analysis Report

Objective

The objective of this project is to analyze marketing performance using the Sample Superstore dataset. Since the dataset does not contain actual marketing campaign data, sales, profit, and ship mode were used as business indicators for analysis.

Dataset

SampleSuperstore.csv

Analysis Performed

1. Campaign Metrics Analysis

Product category sales and profit were analyzed to identify high-performing business areas.

2. ROI Calculation

An estimated Return on Investment (ROI) was calculated using the formula:

$$\text{ROI} = (\text{Total Profit} / \text{Total Sales}) \times 100$$

3. Channel Effectiveness

Ship Mode was analyzed as a business distribution channel to understand sales performance.

Key Insights

- Technology generated strong business value.
- Some product categories contributed lower profits.
- Standard Class handled the highest sales volume.
- Estimated ROI indicates the overall profitability of the business.

Business Recommendations

- Increase marketing investment in high-performing product categories.
- Improve profitability by reducing unnecessary discounts.
- Optimize high-performing shipping channels.
- Track ROI regularly for better decision-making.
- Use sales and profit trends to improve future marketing strategies.

Conclusion

Although the dataset does not include real marketing campaign information, analyzing sales, profit, ROI, and ship mode provides valuable business insights that support better strategic planning.
