

# Data Preparation Strategy

## Objective

Prepare a clean dataset before analysis by applying data cleaning rules and transformations.

## Cleaning Rules

- Remove duplicate records
- Check missing values
- Validate numeric values
- Verify data consistency
- Standardize the dataset
- Prepare data for analysis

## Transformations Applied

- Removed duplicate rows
- Created Profit Margin (%) column
- Generated summary statistics
- Exported cleaned dataset

## Final Output

Prepared\_Dataset.csv

Dataset is ready for analysis and visualization.
